CANDIDATE NAME				
CENTRE NUMBER		CANDIDATE NUMBER		

CHEMISTRY 0620/42

Paper 4 Theory (Extended)

February/March 2024

1 hour 15 minutes

You must answer on the question paper.

No additional materials are needed.

## **INSTRUCTIONS**

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

## **INFORMATION**

- The total mark for this paper is 80.
- The number of marks for each question or part question is shown in brackets [ ].
- The Periodic Table is printed in the question paper.

Iron ore contains iron(III) oxide,  $Fe_2O_3$ . A blast furnace is used to extract iron from  $Fe_2O_3$ .

Equatio	ns for some of the reactions in the blast furnace are shown.
equatio	on 1 $C + O_2 \rightarrow CO_2$
equatio	on 2 $CaCO_3 \rightarrow CaO + CO_2$
equatio	on 3 CaO + $SiO_2 \rightarrow CaSiO_3$
(a) Eq	uation 1 shows the combustion of carbon in the blast furnace.
(i)	Name the substance which provides the carbon for this reaction.
	[1]
(ii)	State the purpose of the combustion of carbon in the blast furnace.
	[1]
	$n(III)$ oxide, $Fe_2O_3$ , in iron ore is converted to iron when it reacts with carbon monoxide, $CO_3$ he blast furnace.
(i)	Calculate the percentage by mass of iron in iron(III) oxide, $Fe_2O_3$ .
( )	
	percentage =% [2]
(ii)	
(ii)	State the name of the iron ore which consists mainly of iron(III) oxide.
	State the name of the iron ore which consists mainly of iron(III) oxide.  [1]
(ii)	State the name of the iron ore which consists mainly of iron(III) oxide.  [1]  Describe how carbon monoxide is formed in the blast furnace.
(iii)	State the name of the iron ore which consists mainly of iron(III) oxide.  [1]  Describe how carbon monoxide is formed in the blast furnace.  [1]
	State the name of the iron ore which consists mainly of iron(III) oxide.  [1]  Describe how carbon monoxide is formed in the blast furnace.
(iii)	State the name of the iron ore which consists mainly of iron(III) oxide.  [1]  Describe how carbon monoxide is formed in the blast furnace.  [1]  Write the symbol equation to show the reaction that occurs when iron(III) oxide is converted.
(iii)	State the name of the iron ore which consists mainly of iron(III) oxide.  [1]  Describe how carbon monoxide is formed in the blast furnace.  [1]  Write the symbol equation to show the reaction that occurs when iron(III) oxide is converted to iron in the blast furnace.  [2]  Name the chemical process which happens to iron when iron(III) oxide is converted to
(iii)	State the name of the iron ore which consists mainly of iron(III) oxide.  [1]  Describe how carbon monoxide is formed in the blast furnace.  [1]  Write the symbol equation to show the reaction that occurs when iron(III) oxide is converted to iron in the blast furnace.  [2]  Name the chemical process which happens to iron when iron(III) oxide is converted to iron in the blast furnace.
(iii)	State the name of the iron ore which consists mainly of iron(III) oxide.  [1]  Describe how carbon monoxide is formed in the blast furnace.  [1]  Write the symbol equation to show the reaction that occurs when iron(III) oxide is converted to iron in the blast furnace.  [2]  Name the chemical process which happens to iron when iron(III) oxide is converted to
(iii) (iv)	State the name of the iron ore which consists mainly of iron(III) oxide.  [1]  Describe how carbon monoxide is formed in the blast furnace.  [1]  Write the symbol equation to show the reaction that occurs when iron(III) oxide is converted to iron in the blast furnace.  [2]  Name the chemical process which happens to iron when iron(III) oxide is converted to iron in the blast furnace.

(d)	(i)	Explain why the reaction in <b>equation 3</b> can be described as an acid–base reaction.	
			[2]
	(ii)	State:	
		• the chemical name of SiO <sub>2</sub>	
		<ul> <li>the common name given to CaSiO<sub>3</sub> when it is formed in the blast furnace.</li> </ul>	
			 [2]
(e)	Aluı	minium <b>cannot</b> be extracted from its ore using a blast furnace.	
	(i)	State why aluminium is <b>not</b> extracted from its ore using a blast furnace.	
			[1]
	(ii)	Name the process used to extract aluminium from its ore.	
			[1]
(f)	Bot	h iron(III) oxide and aluminium oxide contain metal ions with a 3+ charge.	
	(i)	Write the electronic configuration of an $Al^{3+}$ ion.	
			[1]
	(ii)	Deduce the number of protons and electrons in an Fe³+ ion.	
		protons electrons	
			[2]

[Total: 19]

	e elements in Group VII of the Periodic Table are known as the halogens. Halogens can fo de ions.	rm
(a)	Identify the halogen with the lowest density at r.t.p. (room temperature and pressure).	[1]
(b)	State the appearance of bromine at r.t.p.	[1]
(c)	Use the Periodic Table to:  • give the symbol of the halogen with the highest atomic number	
	deduce the number of occupied electron shells in an atom of this element.	
	·	 [2]
(d)	Bromine molecules have covalent bonding.  (i) State what is meant by the term covalent bond.	
	(ii) Name <b>one</b> halide ion which bromine molecules can displace.	[2]
(	(iii) Explain why bromine can displace the halide ion in (d)(ii).	[1]
(e)	Name a halide compound which can be used to detect the presence of water.	[1]
		[2]

(f) Calcium chloride is an ionic compound.

Complete the dot-and-cross diagram in Fig. 2.1 for the ions in calcium chloride.

Give the charges on each of the ions.

(iii)

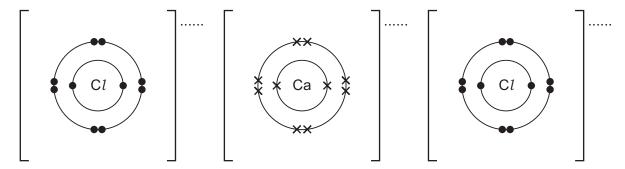

Fig. 2.1

[3]

- (g) Aqueous lead(II) ions are added to aqueous chloride ions. A white precipitate of insoluble lead(II) chloride,  $PbCl_2$ , is formed.
  - (i) Name a lead(II) compound which can be used in this reaction.

	[1]
Write the ionic equation for this reaction. Include state symbols	

(ii) Write the ionic equation for this reaction. Include state symbols.

	[3]
Name one <b>other</b> insoluble chloride.	

.....[1]

[Total: 18]

3 This question is about acids, bases and alkalis.

Table 3.1 shows the pH values of some substances.

Table 3.1

substance	рН
NaOH(aq)	14
Ca(OH) <sub>2</sub> (aq)	10
H <sub>2</sub> O(I)	7
CH₃COOH(aq)	4
HNO <sub>3</sub> (aq)	1

(a)	De	fine the term base.
(b)	Sta	[1] Ite what is meant by the term alkali.
, ,		[1]
(c)	Thy	ymolphthalein is an indicator.
	Sta	te the colour of thymolphthalein in:
	•	NaOH(aq)
	•	CH <sub>3</sub> COOH(aq).
		[2]
(d)	(i)	Use the information in Table 3.1 to identify the substance with the highest concentration of $H^{\dagger}(aq)$ ions.
		Explain your answer.
		substance
		explanation[2]
	(ii)	Name an indicator which can be used to identify the substance with the highest concentration of $H^{\scriptscriptstyle +}(aq)$ ions.
		[1]

(e)	Complete the equation to show the dissociation of ethanoic acid, CH <sub>3</sub> COOH, in aqueous solution.
	CH <sub>3</sub> COOH(aq)[3]
(f)	Write the <b>ionic</b> equation which represents a neutralisation reaction between any acid and any alkali.
	[1]
(g)	Dilute nitric acid, HNO <sub>3</sub> (aq), reacts with aqueous calcium hydroxide, Ca(OH) <sub>2</sub> (aq), as shown.
	$2HNO_3(aq) + Ca(OH)_2(aq) \rightarrow Ca(NO_3)_2(aq) + 2H_2O(I)$
	$20.0\mathrm{cm^3}$ of $0.0150\mathrm{mol/dm^3}$ Ca(OH) <sub>2</sub> (aq) reacts with $25.0\mathrm{cm^3}$ of HNO <sub>3</sub> (aq).
	Calculate the concentration of HNO <sub>3</sub> (aq) in g/dm <sup>3</sup> .
	Use the following steps.
	<ul> <li>Calculate the number of moles of Ca(OH)<sub>2</sub>(aq) used.</li> </ul>
	mol
	<ul> <li>Determine the number of moles of HNO<sub>3</sub>(aq) which react with the Ca(OH)<sub>2</sub>(aq).</li> </ul>
	mol
	• Calculate the concentration of HNO <sub>3</sub> (aq) in mol/dm <sup>3</sup> .
	mol/dm <sup>3</sup>
	• Calculate the concentration of HNO <sub>3</sub> (aq) in g/dm <sup>3</sup> .
	g/dm³ [5]
	[Total: 16]

	uation for the reaction between methanoic acid and ethanol in the presence of a catalyst resented as shown.	can
	HCOOH + $CH_3CH_2OH \rightleftharpoons X + H_2O \qquad \Delta H = -29.5 \text{ kJ/mol}$	
X repre	esents the ester formed.	
(a) (i)	In the equation, methanoic acid is represented by the formula HCOOH.	
	Name this type of formula.	
		[1]
(ii)	Write the empirical formula of methanoic acid.	
		[1]
<b>(b)</b> Na	ame and draw the displayed formula of ester <b>X</b> .	
na	me	
dis	splayed formula	
		[3]
(c) Th	ne reaction is reversible and reaches an equilibrium within a closed system.	
(i)	State what is meant by the term closed system.	
		[1]
(ii)	State <b>two</b> characteristics of an equilibrium.	
	1	
	2	

[2]

(iii) Complete Table 4.1 to show the effect, if any, on the concentration of **X** at equilibrium for each change of condition.

Table 4.1

change of condition	effect on the concentration of <b>X</b> at equilibrium
temperature is decreased	
concentration of HCOOH is decreased	
concentrations of both HCOOH and CH <sub>3</sub> CH <sub>2</sub> OH are decreased	
the catalyst is removed	

[4]

[Total: 12]

Butane	and but-1-ene are colourless gases at room temperature and pressure.	
(a) Su	ggest why but-1-ene diffuses quicker than butane.	
		[1]
<b>(b)</b> Ide	ntify the products formed when butane undergoes complete combustion.	
		[1]
	e molecule of butane reacts with one molecule of chlorine in the presence of ultraviolet li ring the reaction, one hydrogen atom in butane is replaced by one chlorine atom.	ght.
(i)	Name the type of reaction which needs ultraviolet light.	
		[1]
(ii)	State the purpose of ultraviolet light during this reaction.	
		[1]
(iii)	Name the type of reaction which takes place when one atom of chlorine replaces atom of hydrogen.	one
		[1]
(iv)	Determine how many different structural isomers can form during this reaction.	
		[1]
(d) Wh	nen but-1-ene reacts with steam, <b>two</b> possible products form.	
(i)	Identify the type of catalyst which is used in this reaction.	
		[1]

(ii) Name and draw the displayed formulae of the two possible products.

product 1	product 2
name	name
displayed formula	displayed formula

г	A	٦
14	4	

(c) But I one undergoes perymonication	(e)	But-1-ene	undergoes	polymerisation
--	-----	-----------	-----------	----------------

(i)	State the type of polymerisation but-1-ene undergoes.	
		[1]

(ii) Draw part of the polymer molecule to show three repeat units.

[3]
